Steps

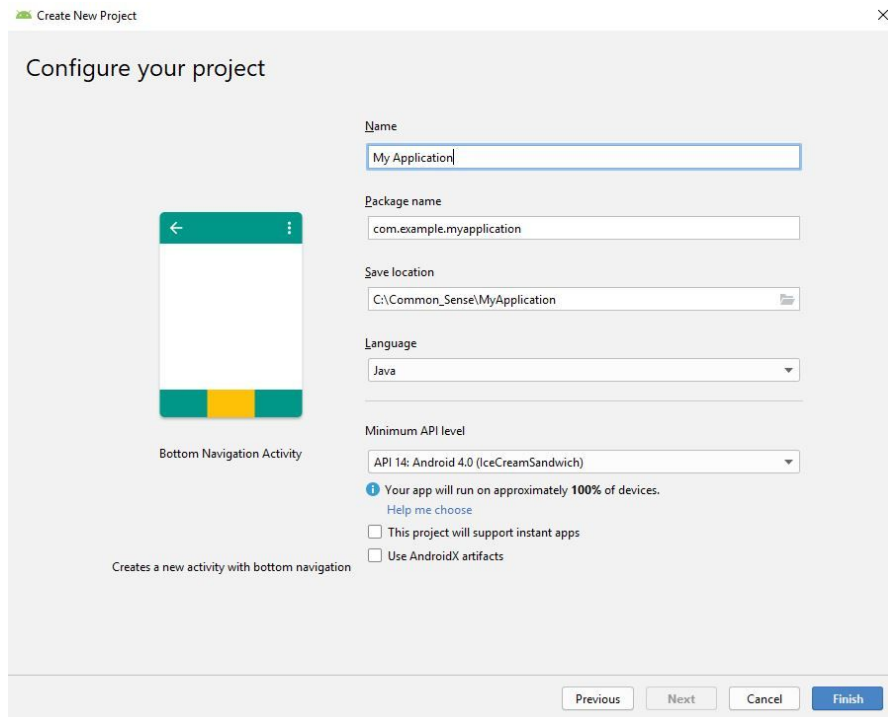

1. Start a new Android Studio project

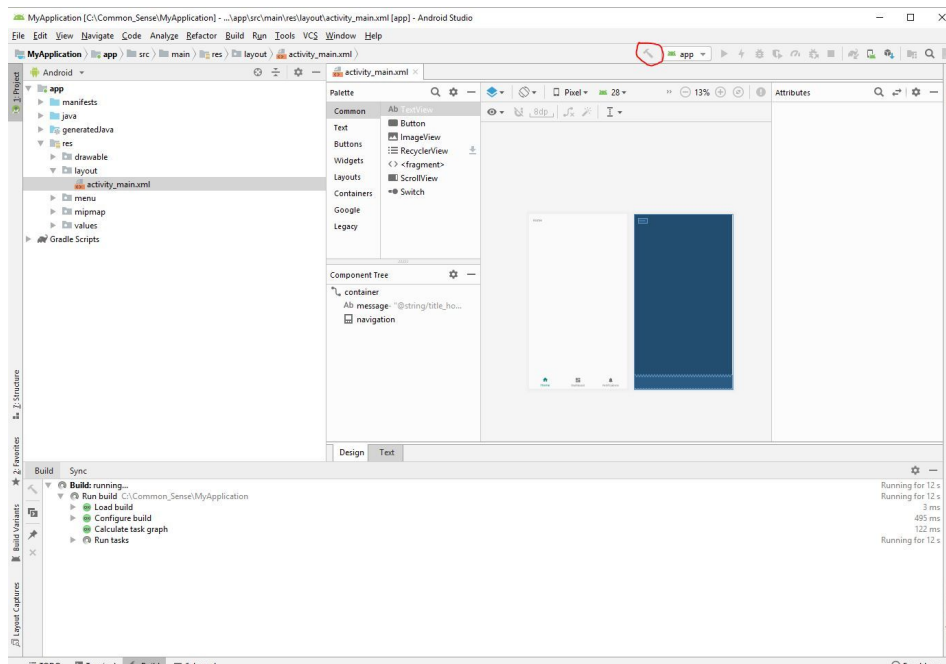

2. Pick Bottom Navigation Activity

3. Name the project and hit finish

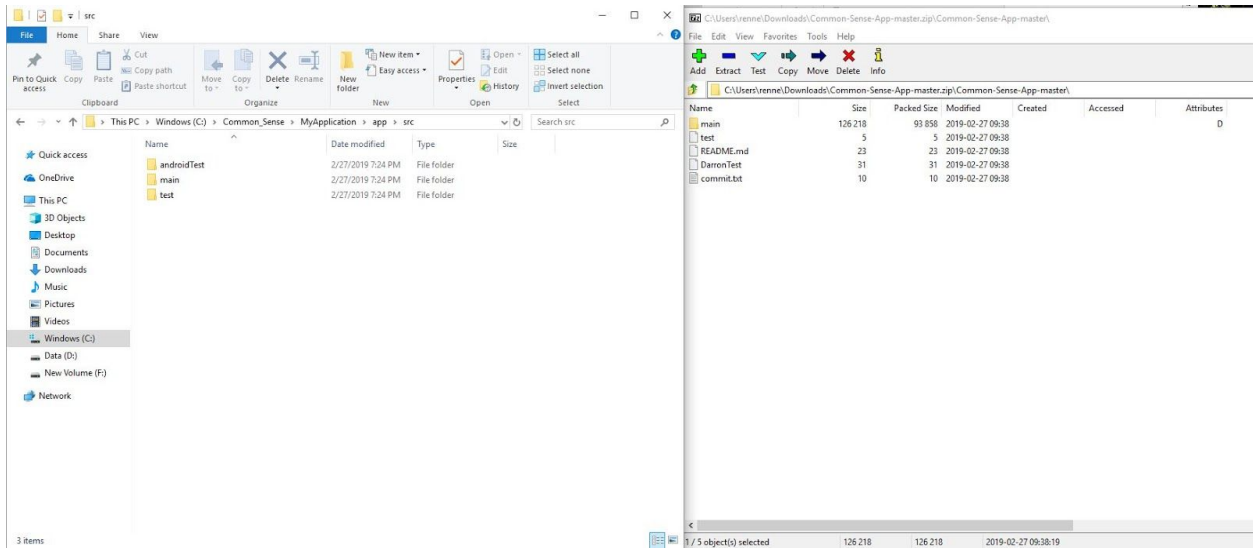

4. Hit the hammer icon

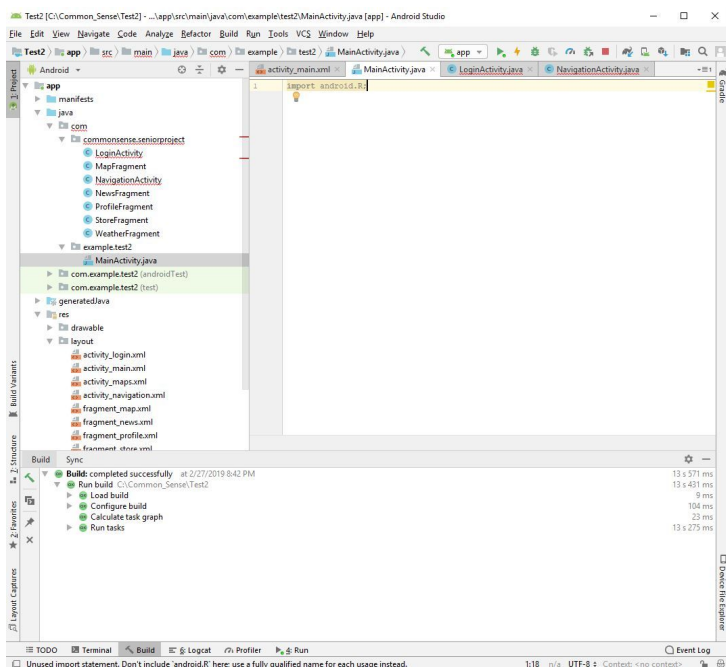

5. Extract the github files

- a. add the main to the C:\<projectfolder>\<projectname>\app\src directory to add and overwrite existing files in the main holder already there

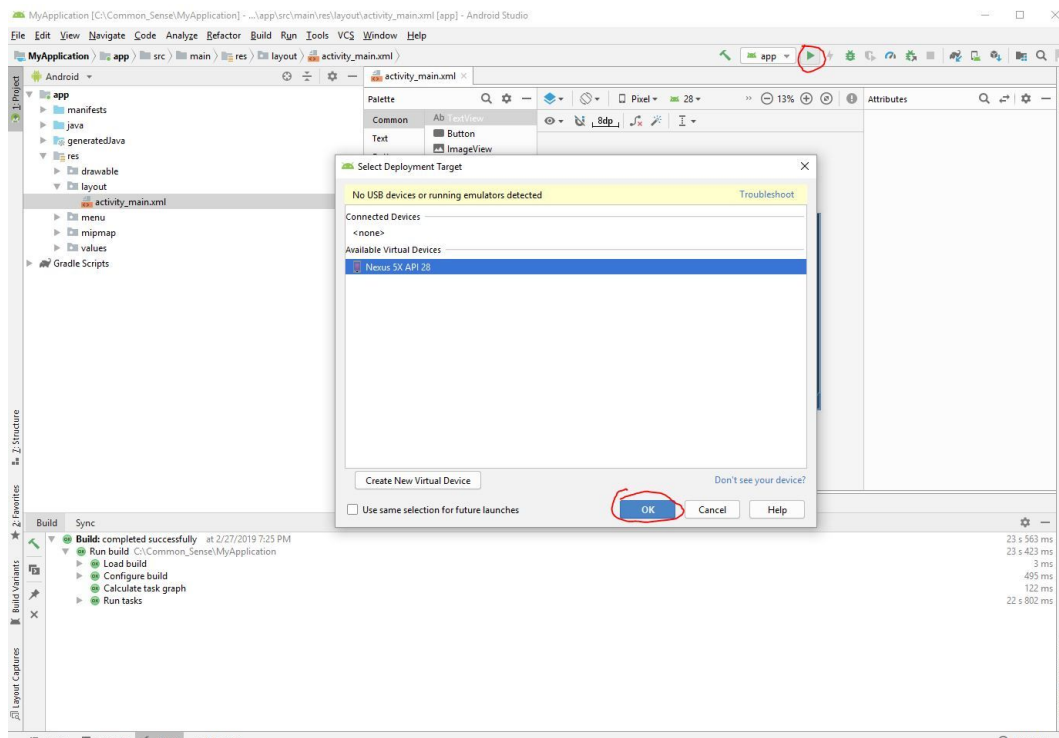

6. Locate the MainActivity.Java on the left sidebar

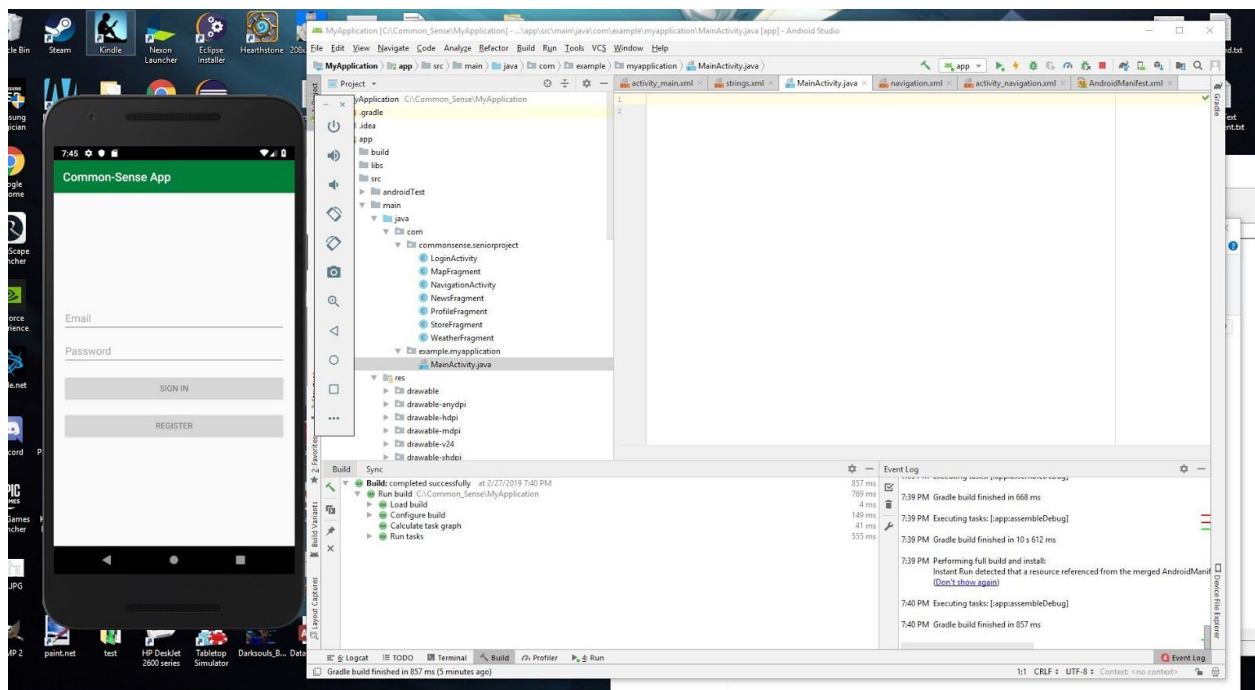

- a. under
 - i. Java/com/example.<projectname>
- b. delete its contents
- c. type import android.R;

7. Hit the play button and select the emulator you downloaded

8. The app is now running in the emulator

String Resource error

click on `android:text="@string/title_home"`

and change `@string/title_home` to `@strings/title_home`
